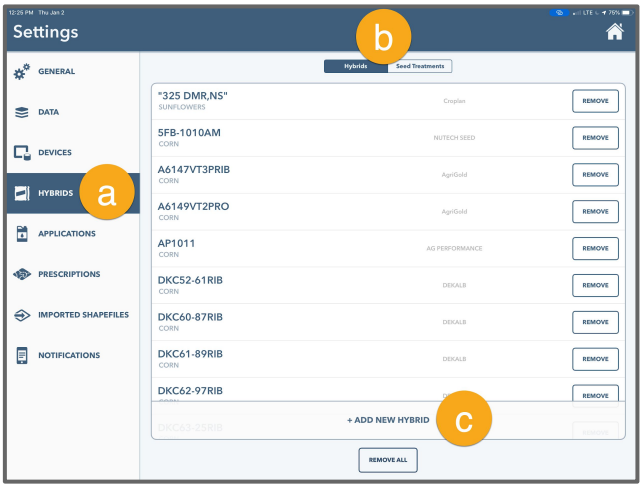
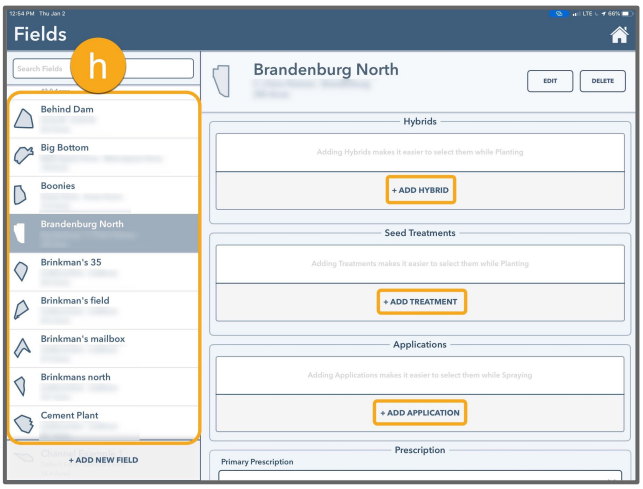
Split Planter Configuration with FieldView Cab

Split planting, planting two different hybrids or seed treatments side-by-side in the same planter pass, can be an effective way to generate powerful data to confirm your seed purchase, population and placement decisions. Utilize this guide to assign different hybrids or seed treatments to specific planter rows.

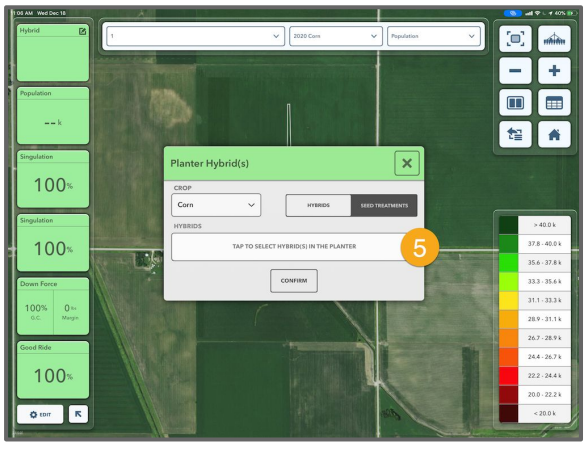
1. Create your **Master Hybrid** or **Master Seed Treatment** list.
   a. Tap **Settings** > **Hybrids.**
   b. Toggle the tabs at the top to **Hybrids** or **Seed Treatments.**
   c. Select **+Add New Hybrid** or **+Add New Treatment.**
   d. Select the **Hybrid** or **Treatment** from the list or begin typing the name.
   e. Once the hybrid or treatment is added to your master list, you are ready to select the fields in which these hybrids/applications will be planted/applied.
   f. Go back to the Home screen by selecting the **Home** button in the upper right, then tap **Fields**.
   g. Fields will be listed on the left and Hybrids, Seed Treatments, and Applications are shown on the right.
   h. Tap **any field** and assign the **hybrid**, **seed treatment** or **application** to this field by tapping **+Add Hybrid**, **+Add Seed Treatment**, or **+Add Application.**





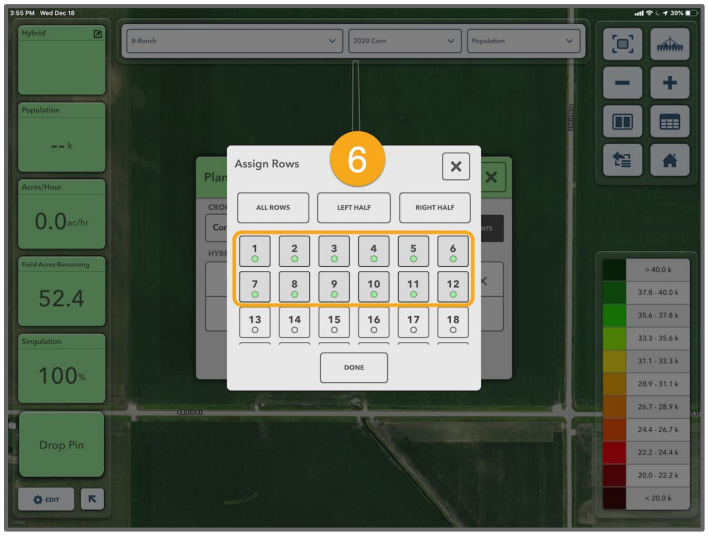
2. **Travel** to the field you are ready to plant and load the planter.
3. Open the **FieldView Cab** app and select the **Map,** and select the **field** you are ready to plant.
4. Tap **Yes**, to make the field active.

5. **Identify** the hybrids in your planter, and **confirm** they match what was previously loaded for the field. To assign hybrids, seed treatments and applications to specific rows, **Tap to Select Hybrid(s) in the Planter.**



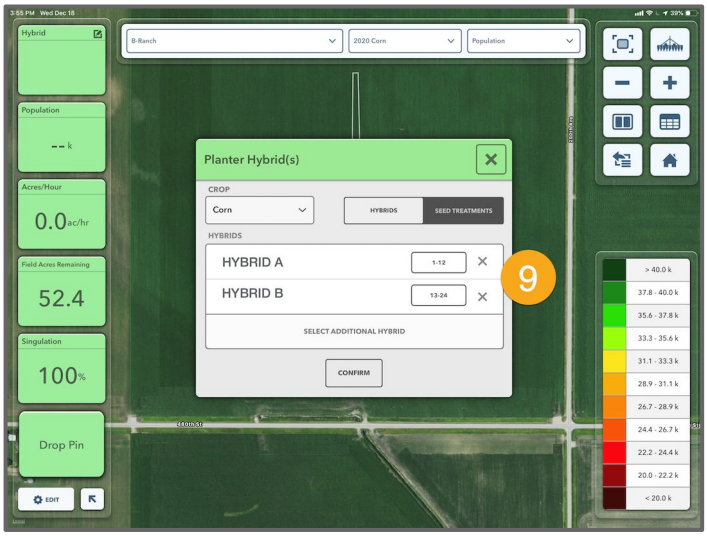
Split Planter Configuration with FieldView Cab App (Continued)

6. Tap **ALL** to assign the hybrid to specific planter rows. Assign rows individually by tapping the **individual rows**, or by **left half** or **right half,** then tap **Done.**

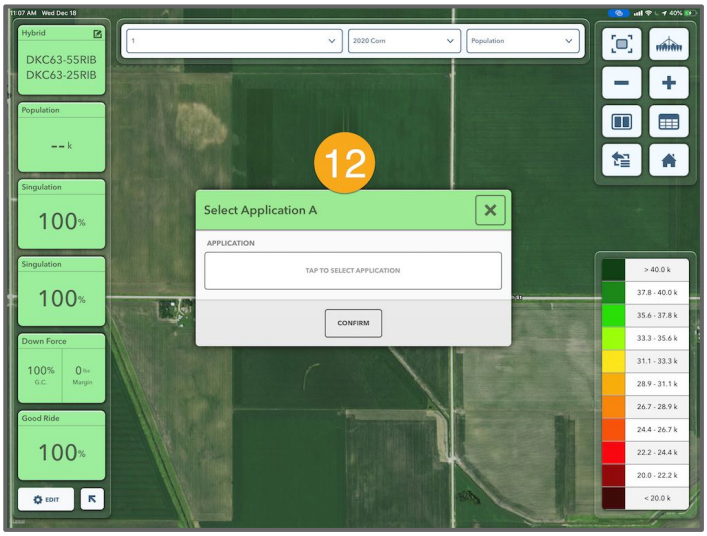


7. Tap **Select Additional Hybrid.**

8. Assign the hybrid to specific rows. Tap **ALL** to assign the hybrid to specific planter rows. Assign rows individually by tapping the **individual rows**, or by **left half** or **right half,** then tap **Done.**
9. Repeat adding additional hybrids and assigning to rows as needed.



10. Toggle the Hybrid/Seed Treatment tab to **Seed Treatment** to add any Seed Treatments. Assign treatments to different rows in the same manner in which hybrids were assigned to rows. (Tap **ALL** to assign the hybrid to specific planter rows. Assign rows individually by tapping the **individual rows**, or by **left half** or **right half,** then tap **Done.)**
11. Tap **Confirm** to complete Hybrid and Seed Treatment assignment.
12. The Application box will appear. Select the application mix that you will be applying while planting.



13. Tap **Confirm** again and you are ready to begin planting and mapping all three planting, seed treatment and applications layers at once.
