Bulk Scripting

Bulk Scripting lets you quickly script multiple fields at once, set hybrids and economic inputs in a single table, and generate faster, more localized recommendations using field-level seeding rates.

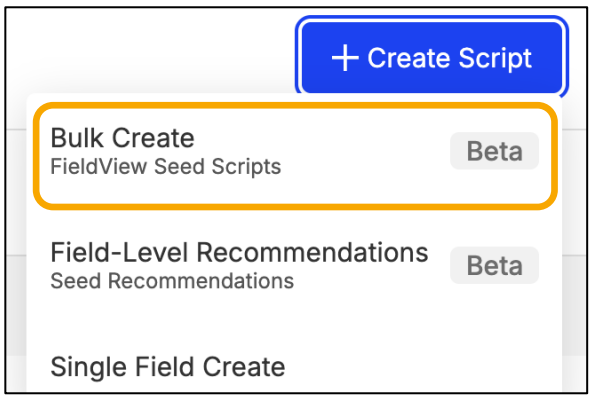

1. Navigate to fieldview.com and select the **Scripts** tab.

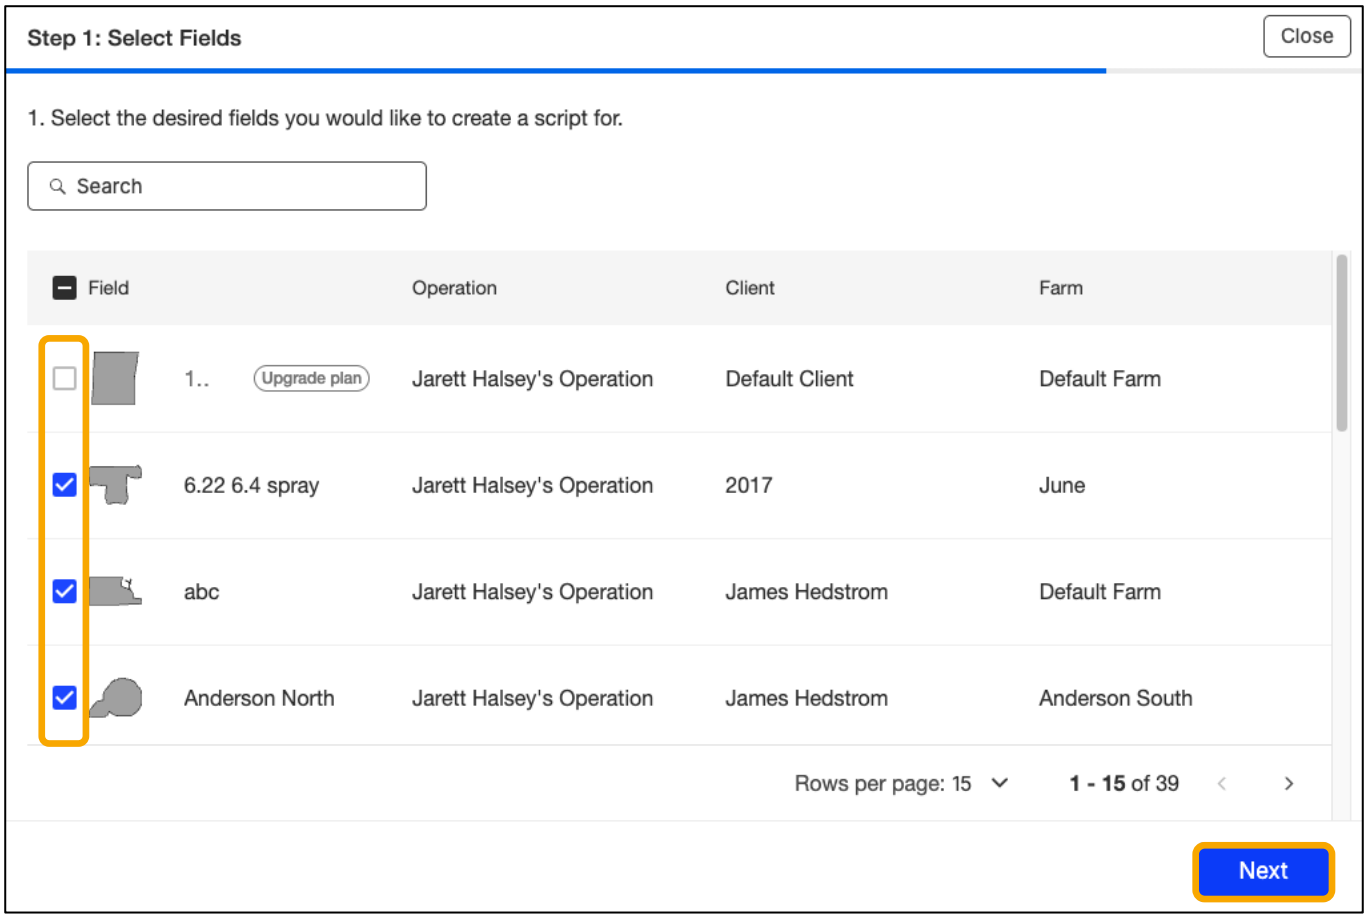

2. Select **+ Create Script**.

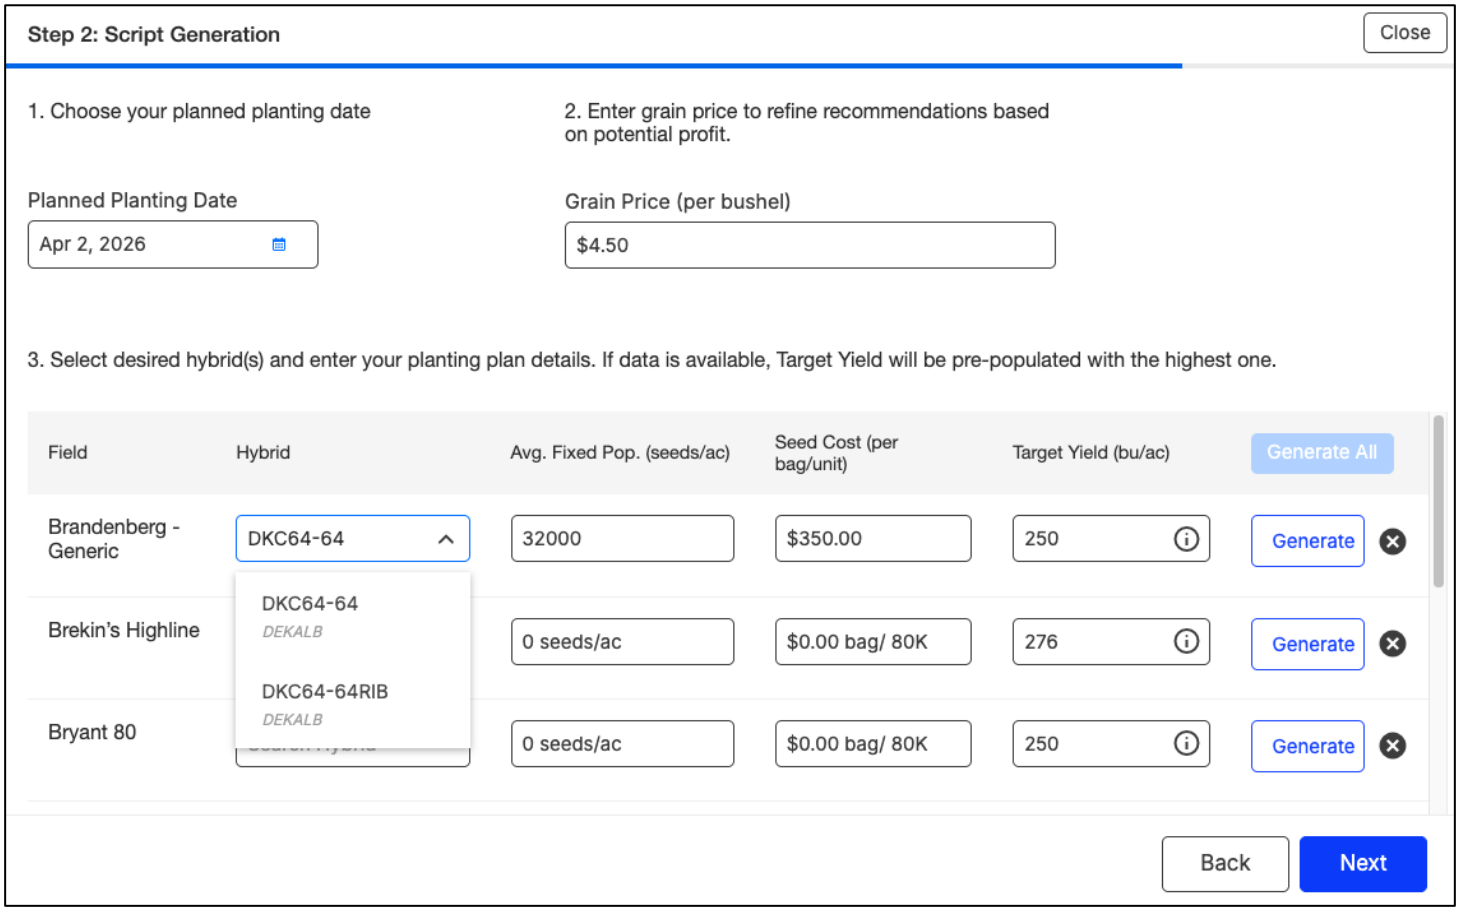

3. Select **Bulk Create**.

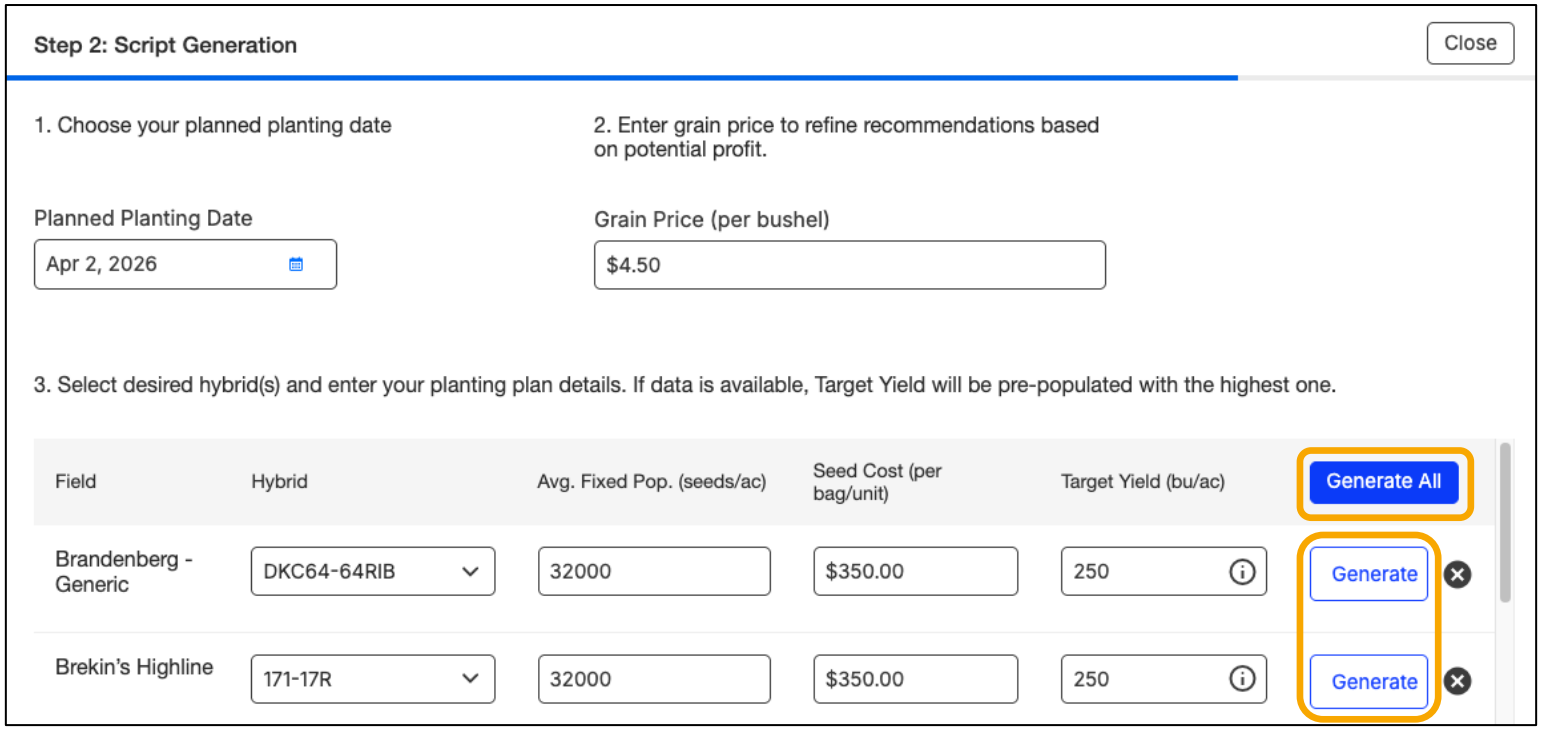

4. Select desired fields to create a bulk script for and click **Next**.

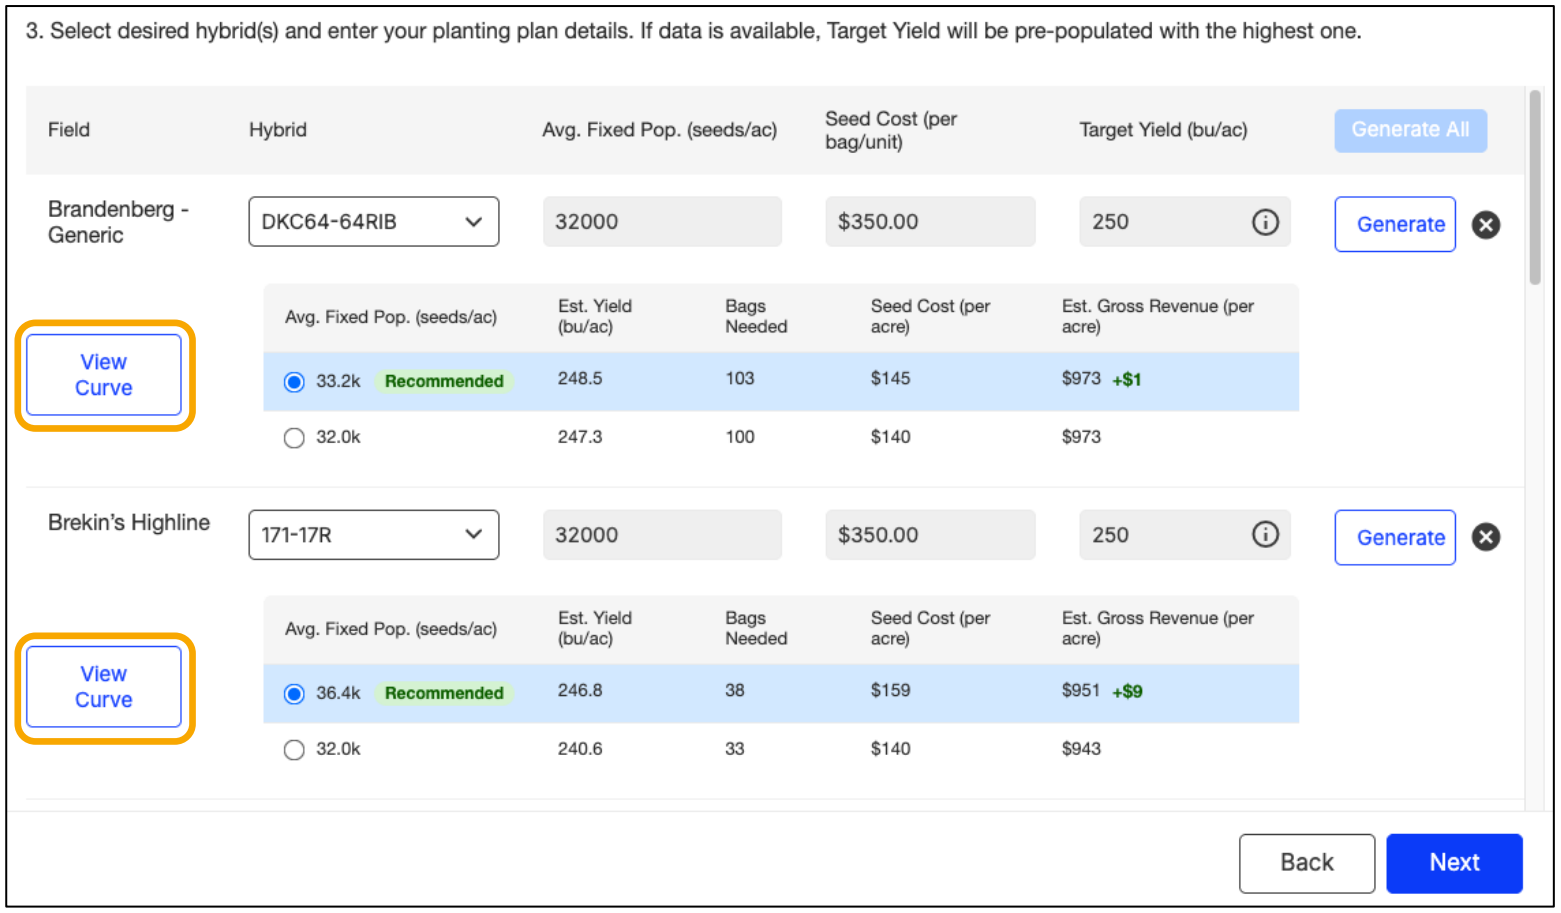

5. Select desired hybrids and enter your plan details.

6. Select **Generate** for an individual field, or **Generate All** to generate recommendations for all fields at once.

7. Click **View Curve** to see the Field-Level Seed Recommendation.

8. Adjust your planting details based on the recommendation by typing directly into the planting detail fields or by moving the planting rate slider or dragging the bar on the graph. When you are satisfied with your changes, click **Save**. If no changes are needed, click **Close**.

9. Updates will be reflected on the fields list > click **Next**.

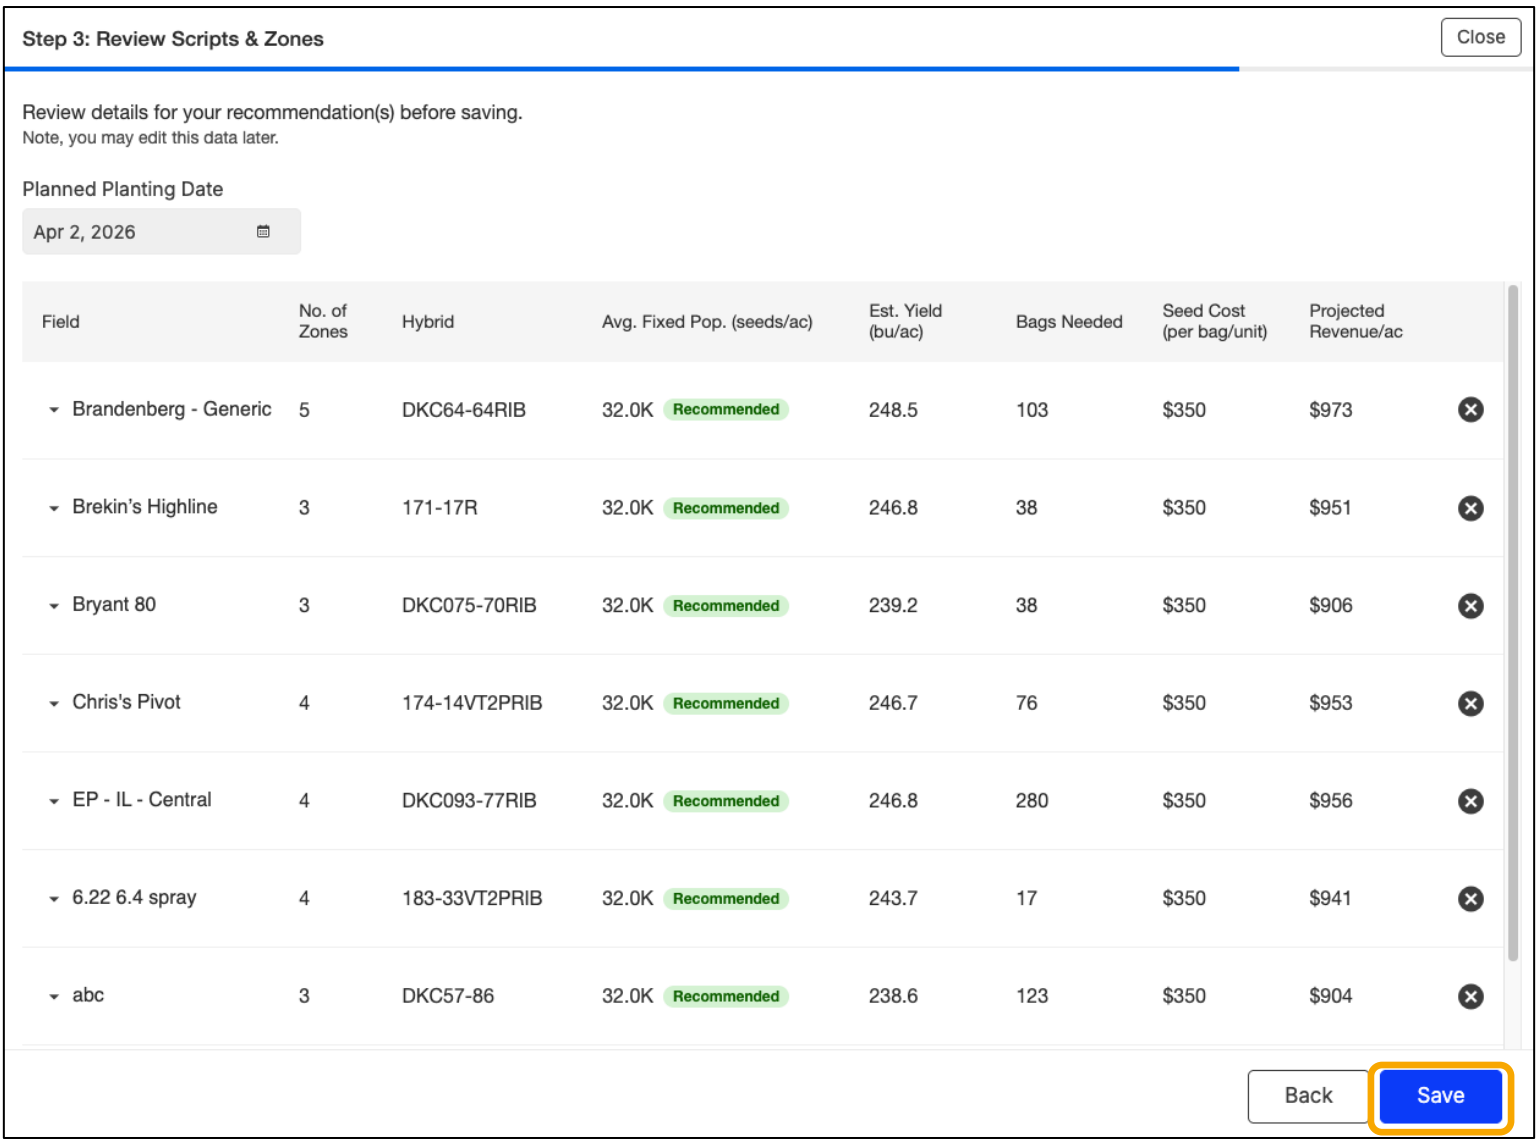

Note: Fields are automatically removed if required data layers are unavailable. A message appears stating, "Insufficient data. Field removed. ⓘ."

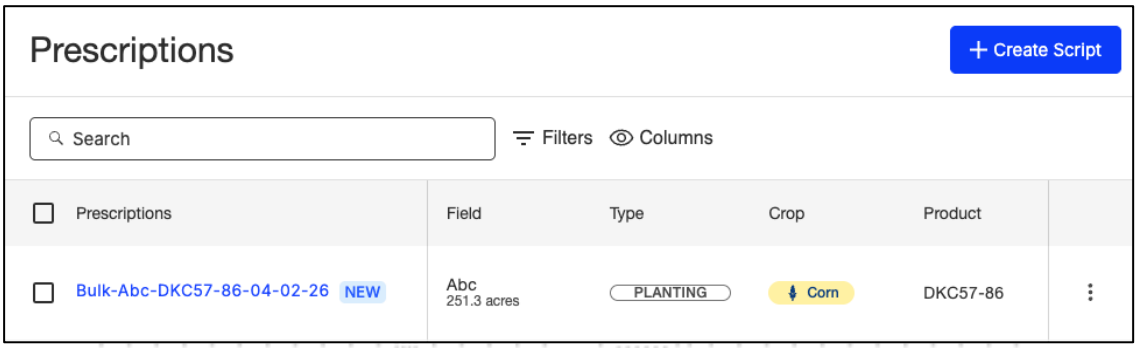

10. Click **Save**.
