Creating Enhanced Prescriptions

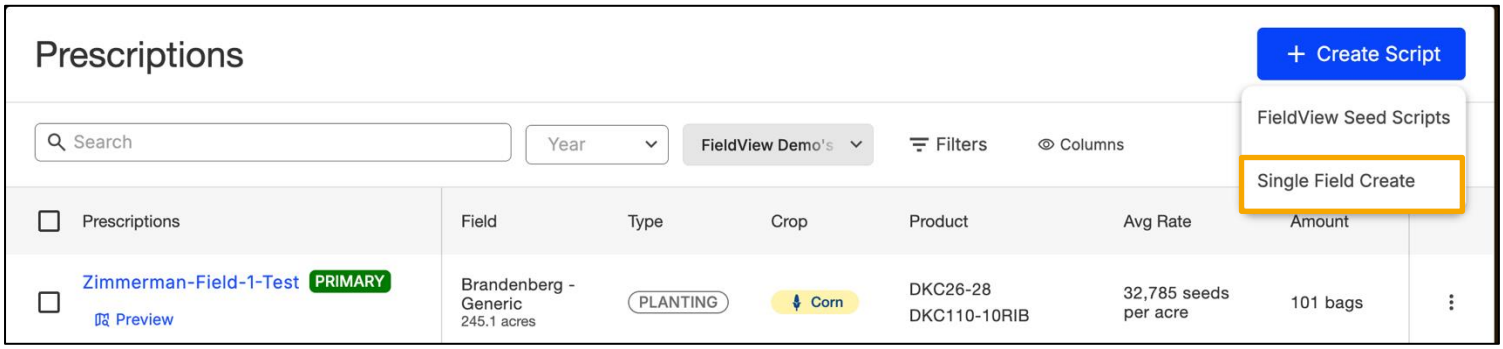

Enhanced Scripting takes your field knowledge so you can easily create field-level management zones and variable rate scripts for fertility, seeding and crop protection plans using your own scouting maps.

1. Navigate to fieldview.com and login with your credentials.
   - Please Note: Prescriptions can only be created on the web.

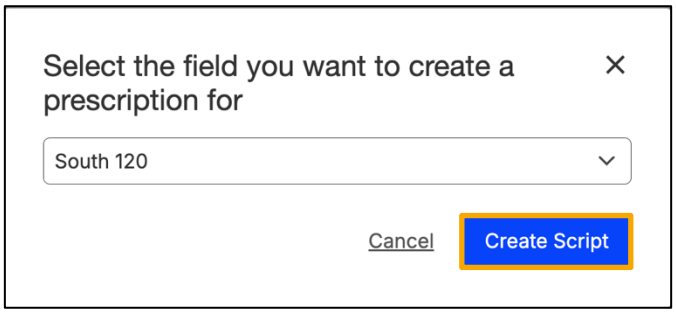

2. Click on the **Scripts** tab on the side navigation panel.

3. Click **+ Create Script** in the top right corner of the screen and select **Single Field Create**.

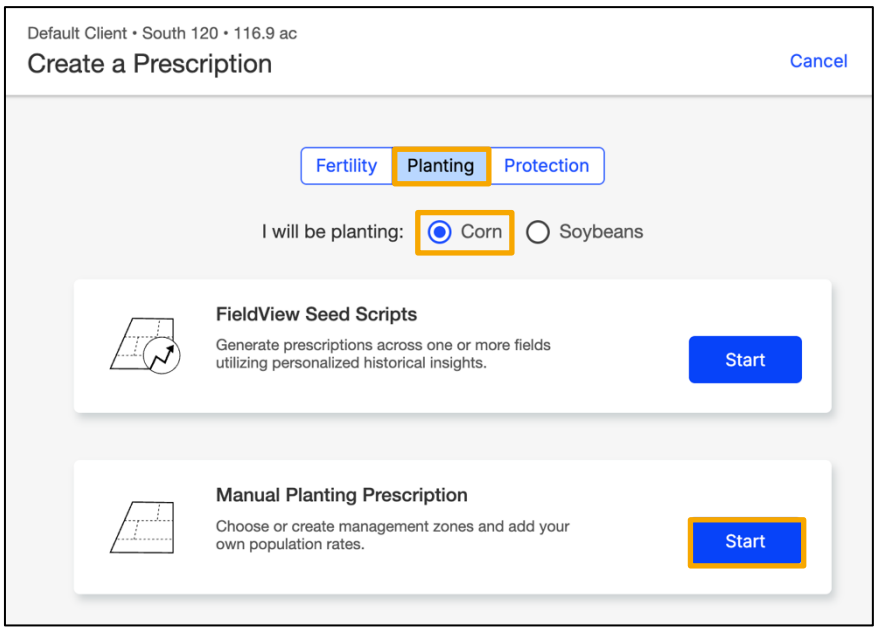

4. Select your field from the drop-down menu and click **Create Script**.

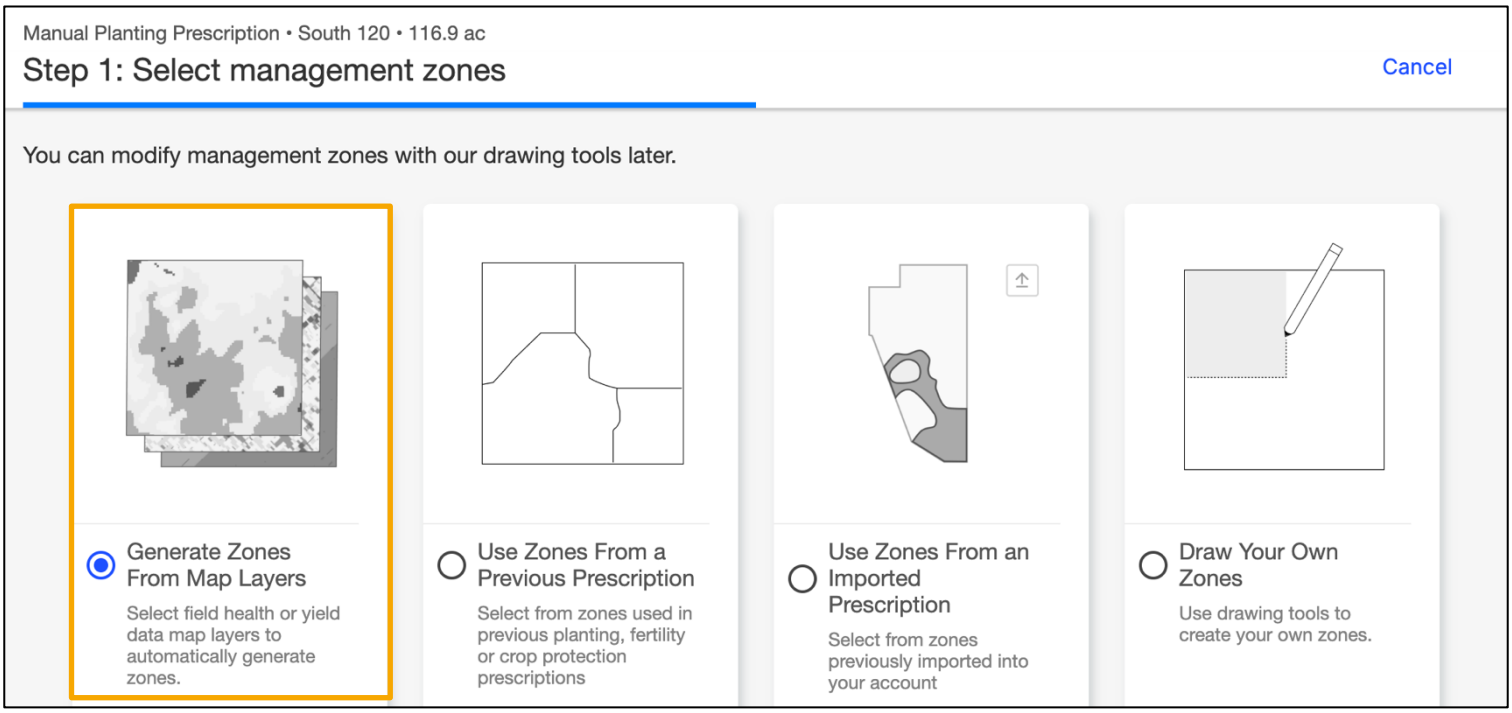

5. Select prescription type (**Fertility**, **Planting**, or **Protection**) and crop (**Corn** or **Soybeans**).

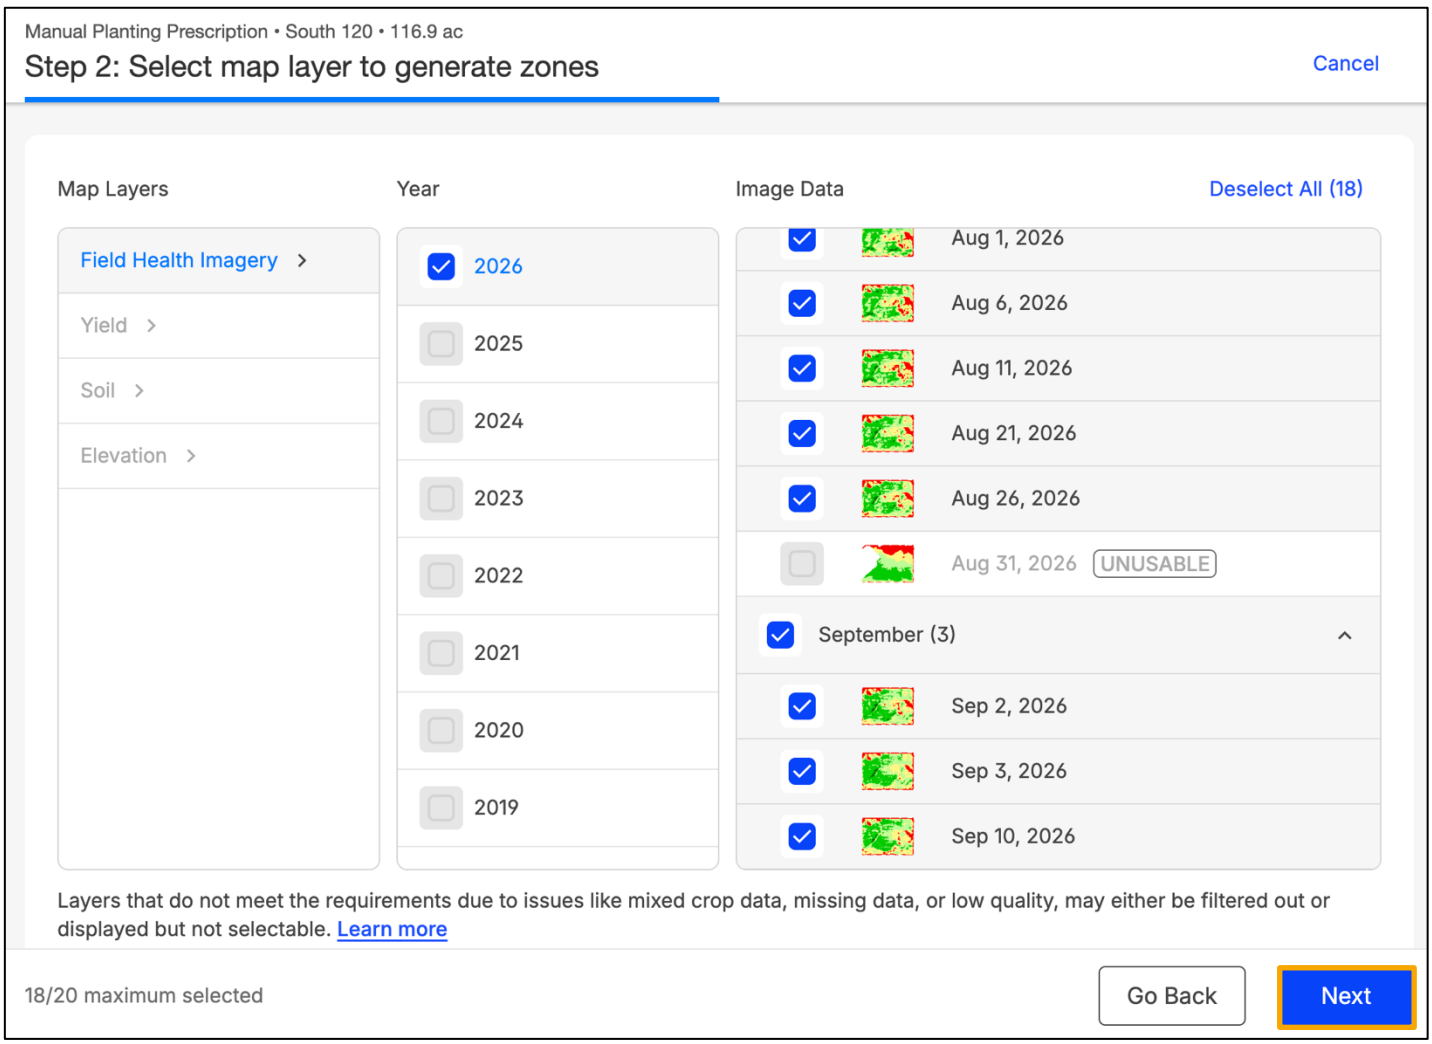

6. Select **Start** next to Manual Prescription.

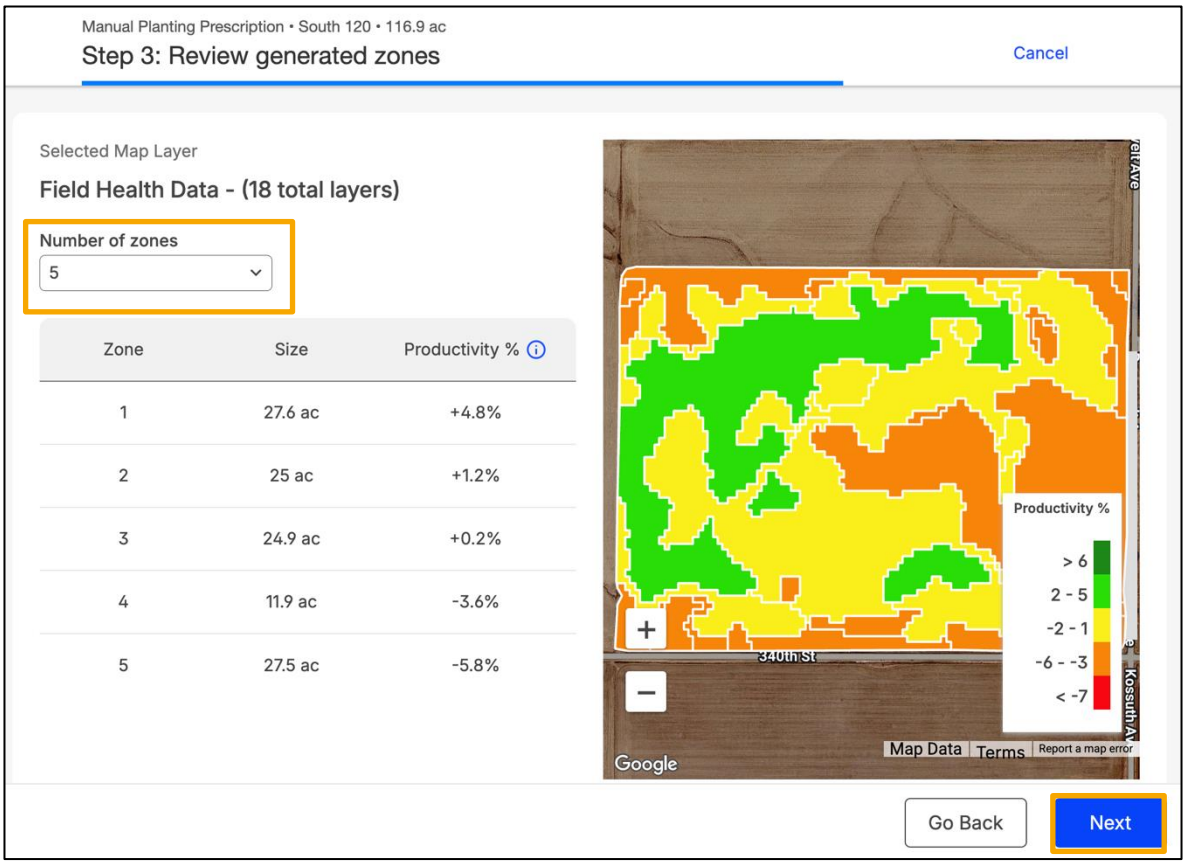

7. For the Enhanced Prescription option, select **Generate Zones from a Map Layer**.
8. Click **Next**.

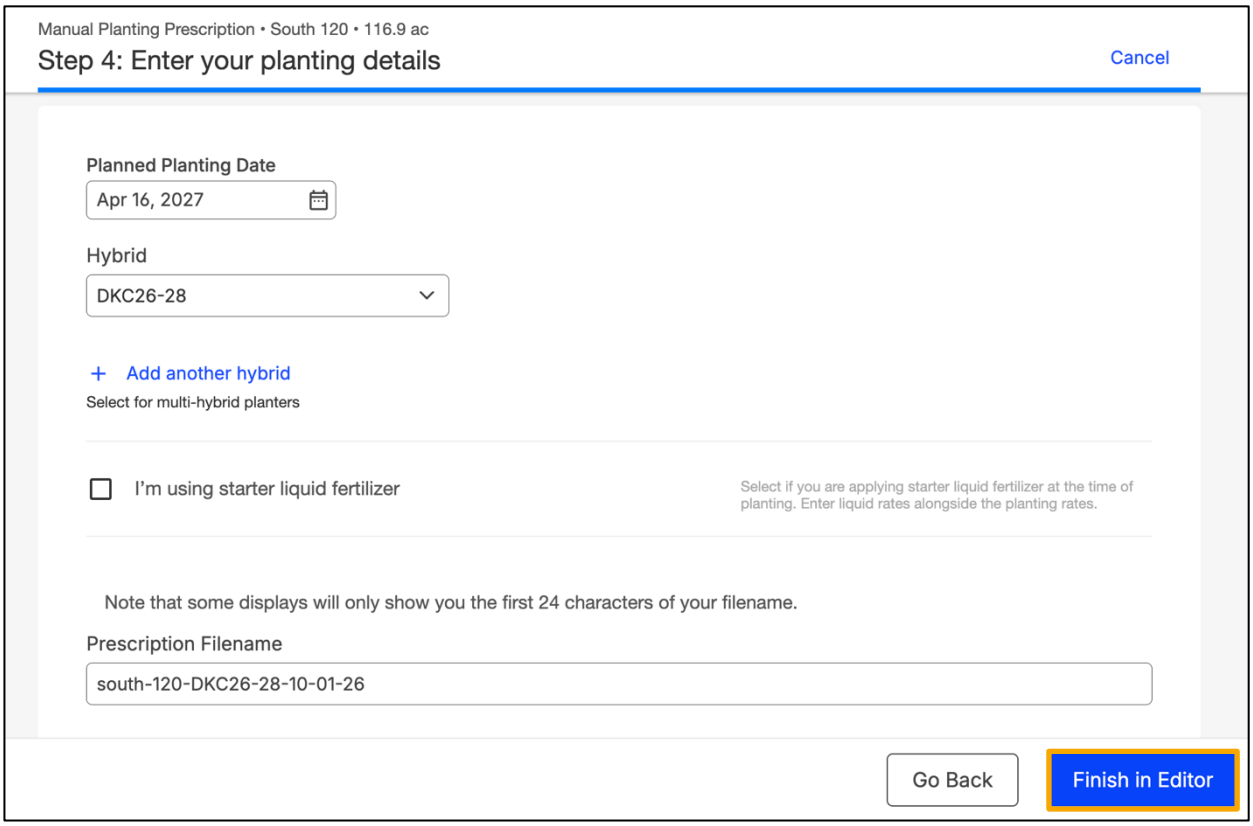

9. Select **Field Health Imagery**, **Yield**, **Soil** or **Elevation**, whichever you wish to base the prescription on and click **Next**.

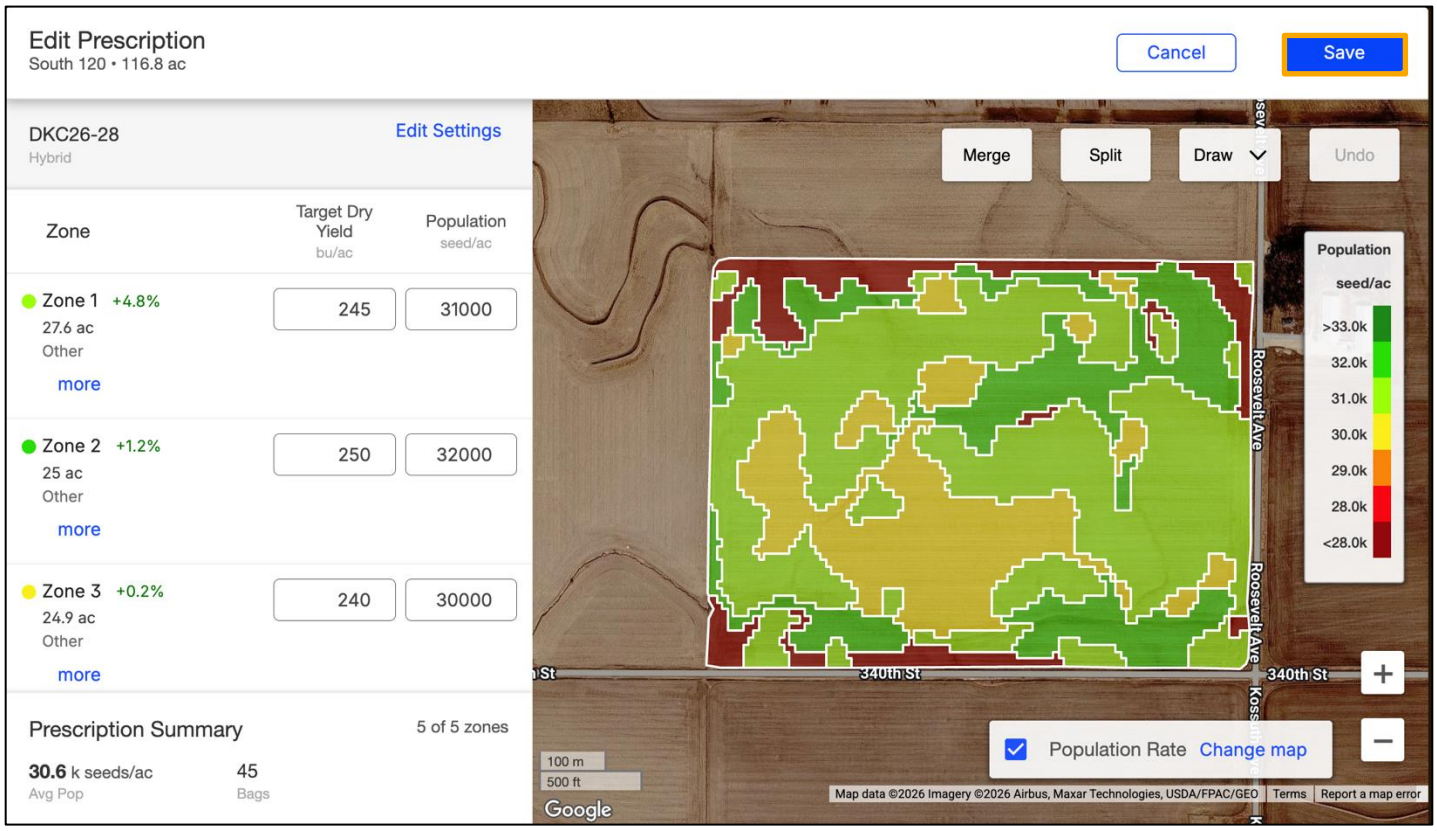

10. Review the generated zones and click **Next**.
    - You can change the number of zones using the drop-down.

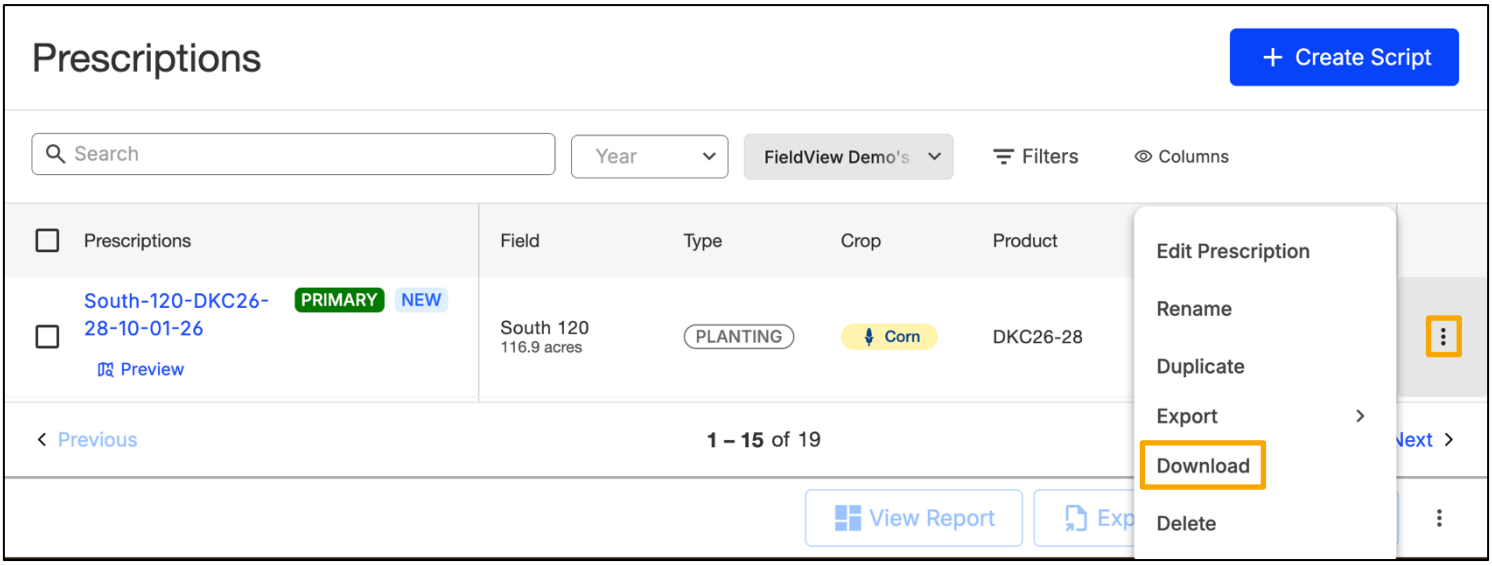

11. Enter the specific data needed for your prescription and click **Finish in Editor** (this example shows a Planting prescription using field health imagery).

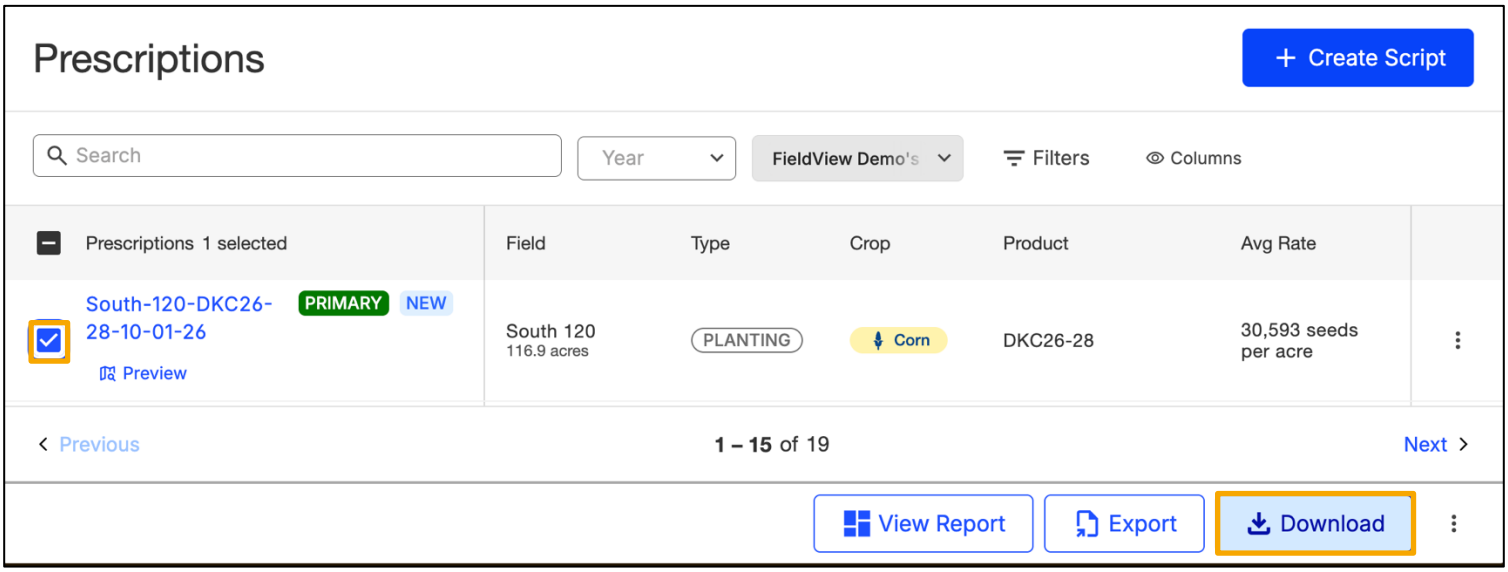

12. On the Script Editing screen, you can manually enter Target Dry Yield and Population as well as make any necessary adjustments.

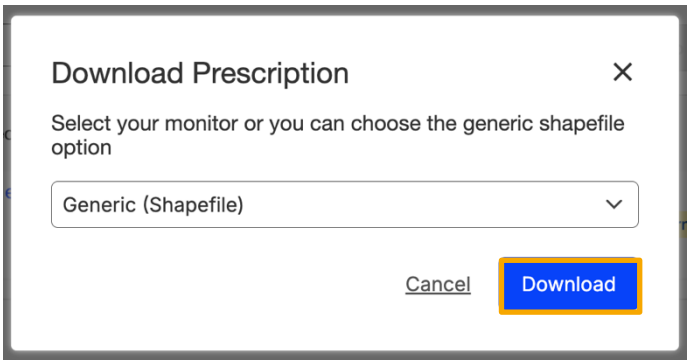

13. You will be redirected to the Prescriptions page. Here you can set your prescriptions as Primary, edit prescriptions, rename, duplicate, export, download, or delete.

14. To download or export a prescription, select the **three dots** next to the prescription and choose the appropriate option. You can also select one or more prescriptions using the checkboxes, then choose **Export** or **Download** from the bottom-right corner of the page.

15. On the **Download Prescriptions** screen, select your monitor or choose the generic shapefile option and click **Download**.
    - You can repeat these steps for additional prescriptions you wish to create.
